# This report serves to determine the top markets with export potential for 11 different food segments and support the direction setting of food promotion

<div>Point of departure</div>	<ul style="list-style-type: none"><li>• The Ministry of Rural Affairs and Infrastructure has set a clear focus on increased exports to increase Swedish food production and the supply rate in the long term</li><li>• From Business Sweden’s previous analyses favourable export conditions identified include strong focus on sustainability, innovation and safety, as well as flexible working methods</li><li>• For a third time, Business Sweden has conducted an analysis on 11 pre-selected segments to assess the export potential</li></ul>	<div>Audience</div>	<ul style="list-style-type: none"><li>• The report:<ul style="list-style-type: none"><li>– targets Swedish companies within the 11 selected segments, and overall industry associations <b>who export today and/or future export ambitions.</b></li><li>– is to be <b>used for discussions</b> with and within the industry and specific segments as well as <b>serve as a complement and support the direction setting of the Try Swedish food promotion.</b></li></ul></li></ul>	<div>Deliverables</div> <div></div> <div>Report, incl. analysis, summary, conclusions and recommendations + separate Appendix</div>
<div>Purpose</div>	<ul style="list-style-type: none"><li>• The purpose of the analysis is to provide support to<ul style="list-style-type: none"><li>– Swedish companies’ export priorities within the 11 food segments chosen by Try Swedish</li><li>– Try Swedish Steering Group when setting the direction of the Government’s food promotion.</li></ul></li></ul>	<div>Limitations</div>	<ul style="list-style-type: none"><li>• The report builds on previous analyses, however the methodology has been updated and can therefore not be compared with previous reports</li><li>• Market specific insights are taken from external reports, i.e. not based on local market interviews. Exact market trends and challenges may vary across specific sub-segments and require more research</li></ul>	<div></div> <div>Summary of the report</div>

# Business Sweden has been analysing the food export potential since 2018 with varying project scopes and methodologies

## First analysis was conducted in 2018

- Business Sweden first analysed the export potential in 2018 on behalf of the Government Offices of Sweden (Ministry of Enterprise and Innovation) and in collaboration with industry organisations and companies. 12 selected segments were reviewed
- It investigated and analysed the export potential of different food segments in different markets and what that potential could look like in five and ten years
- The analysis carried out in 2018 was well received by the industry and served as a basis for dialogue with various actors working with food exports

Project scope 2018	Methodology
Food segment selection analysis	Development of methodology
Swedish prerequisites	Industry interviews
Quantitative Market Selection Analysis	Desktop research
Qualitative Market Selection Analysis	Market interviews
5- & 10-year outlook	Company survey
Input on activities for food promotion	

## An update was initiated in 2020

- The updated analysis provided an opportunity for a critical evaluation of the overall conclusions and map the market development since 2018, incl. Covid-19s impact and global trends going forward
- The updated analysis re-examined the 12 segments drew conclusions on significant market developments since the report in 2018

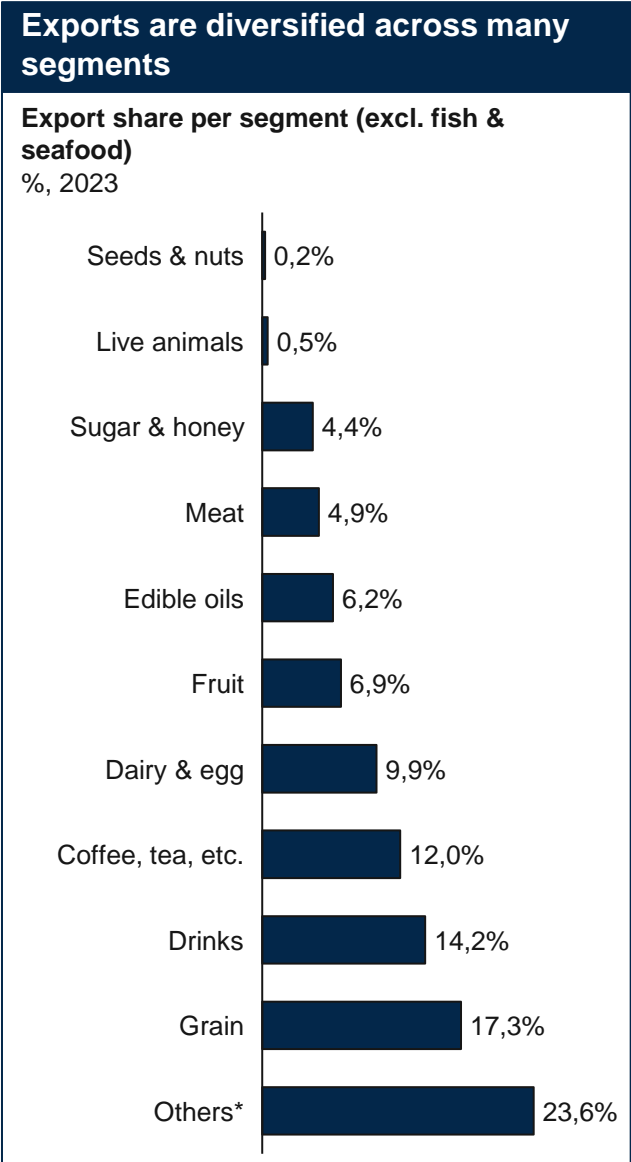

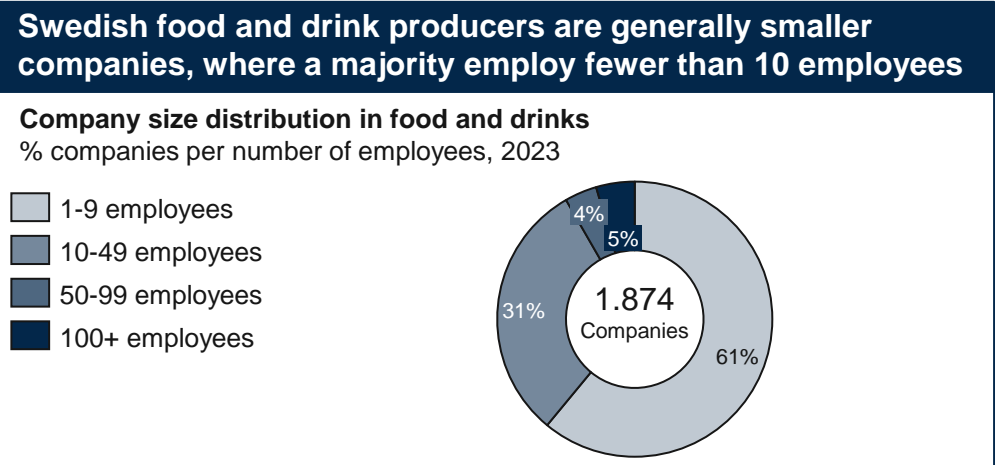

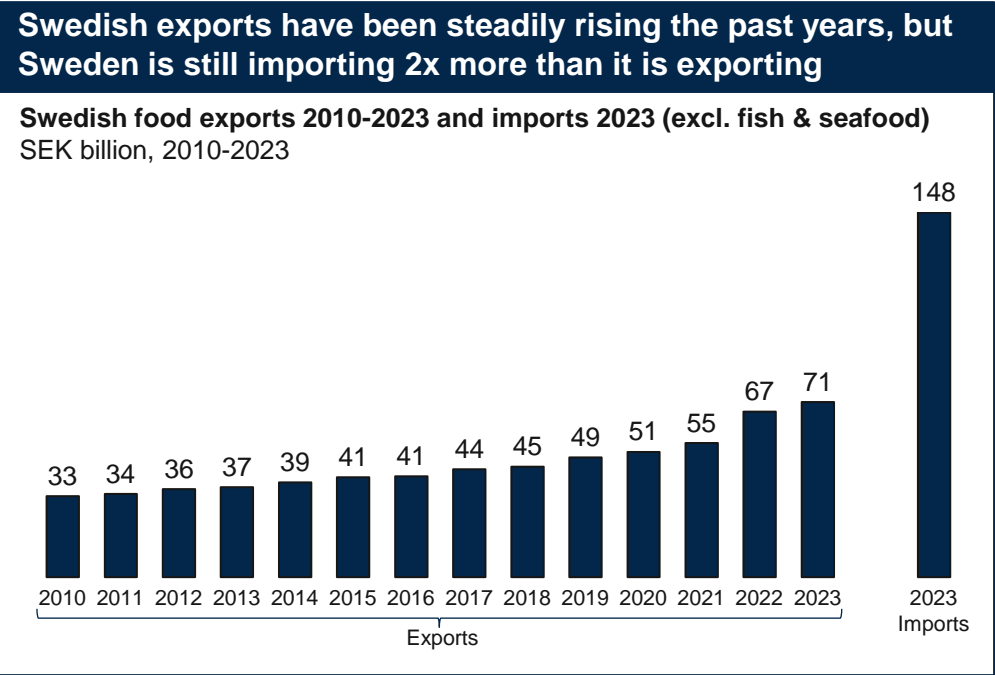

Project scope 2021	Methodology
Food segment selection analysis	Development of methodology
Swedish prerequisites	Industry interviews
Quantitative Market Selection Analysis	Desktop research
Qualitative Market Selection Analysis	Market interviews
5- & 10-year outlook	Company survey
Input on activities for food promotion	

## A new report will be published in June 2024

- The new report reviews 11 preselected food segments with the aim to identify 1-2 prioritised markets per segment
- By illustrating top markets per segment, including trends, challenges, opportunities and Swedish priorities, the report gives input on what markets that provide potential for Swedish companies
- With more limited interview input in scope, a 2-minute company survey was added for input on current and priority markets going forward

Project scope 2024	Methodology
Food segment selection analysis	Adaption of methodology
Swedish prerequisites	Industry interviews (limited)
Quantitative Market Selection Analysis	Desktop research
Qualitative Market Selection Analysis	Third-party reports
5- & 10-year outlook	Company survey
Input on activities for food promotion	

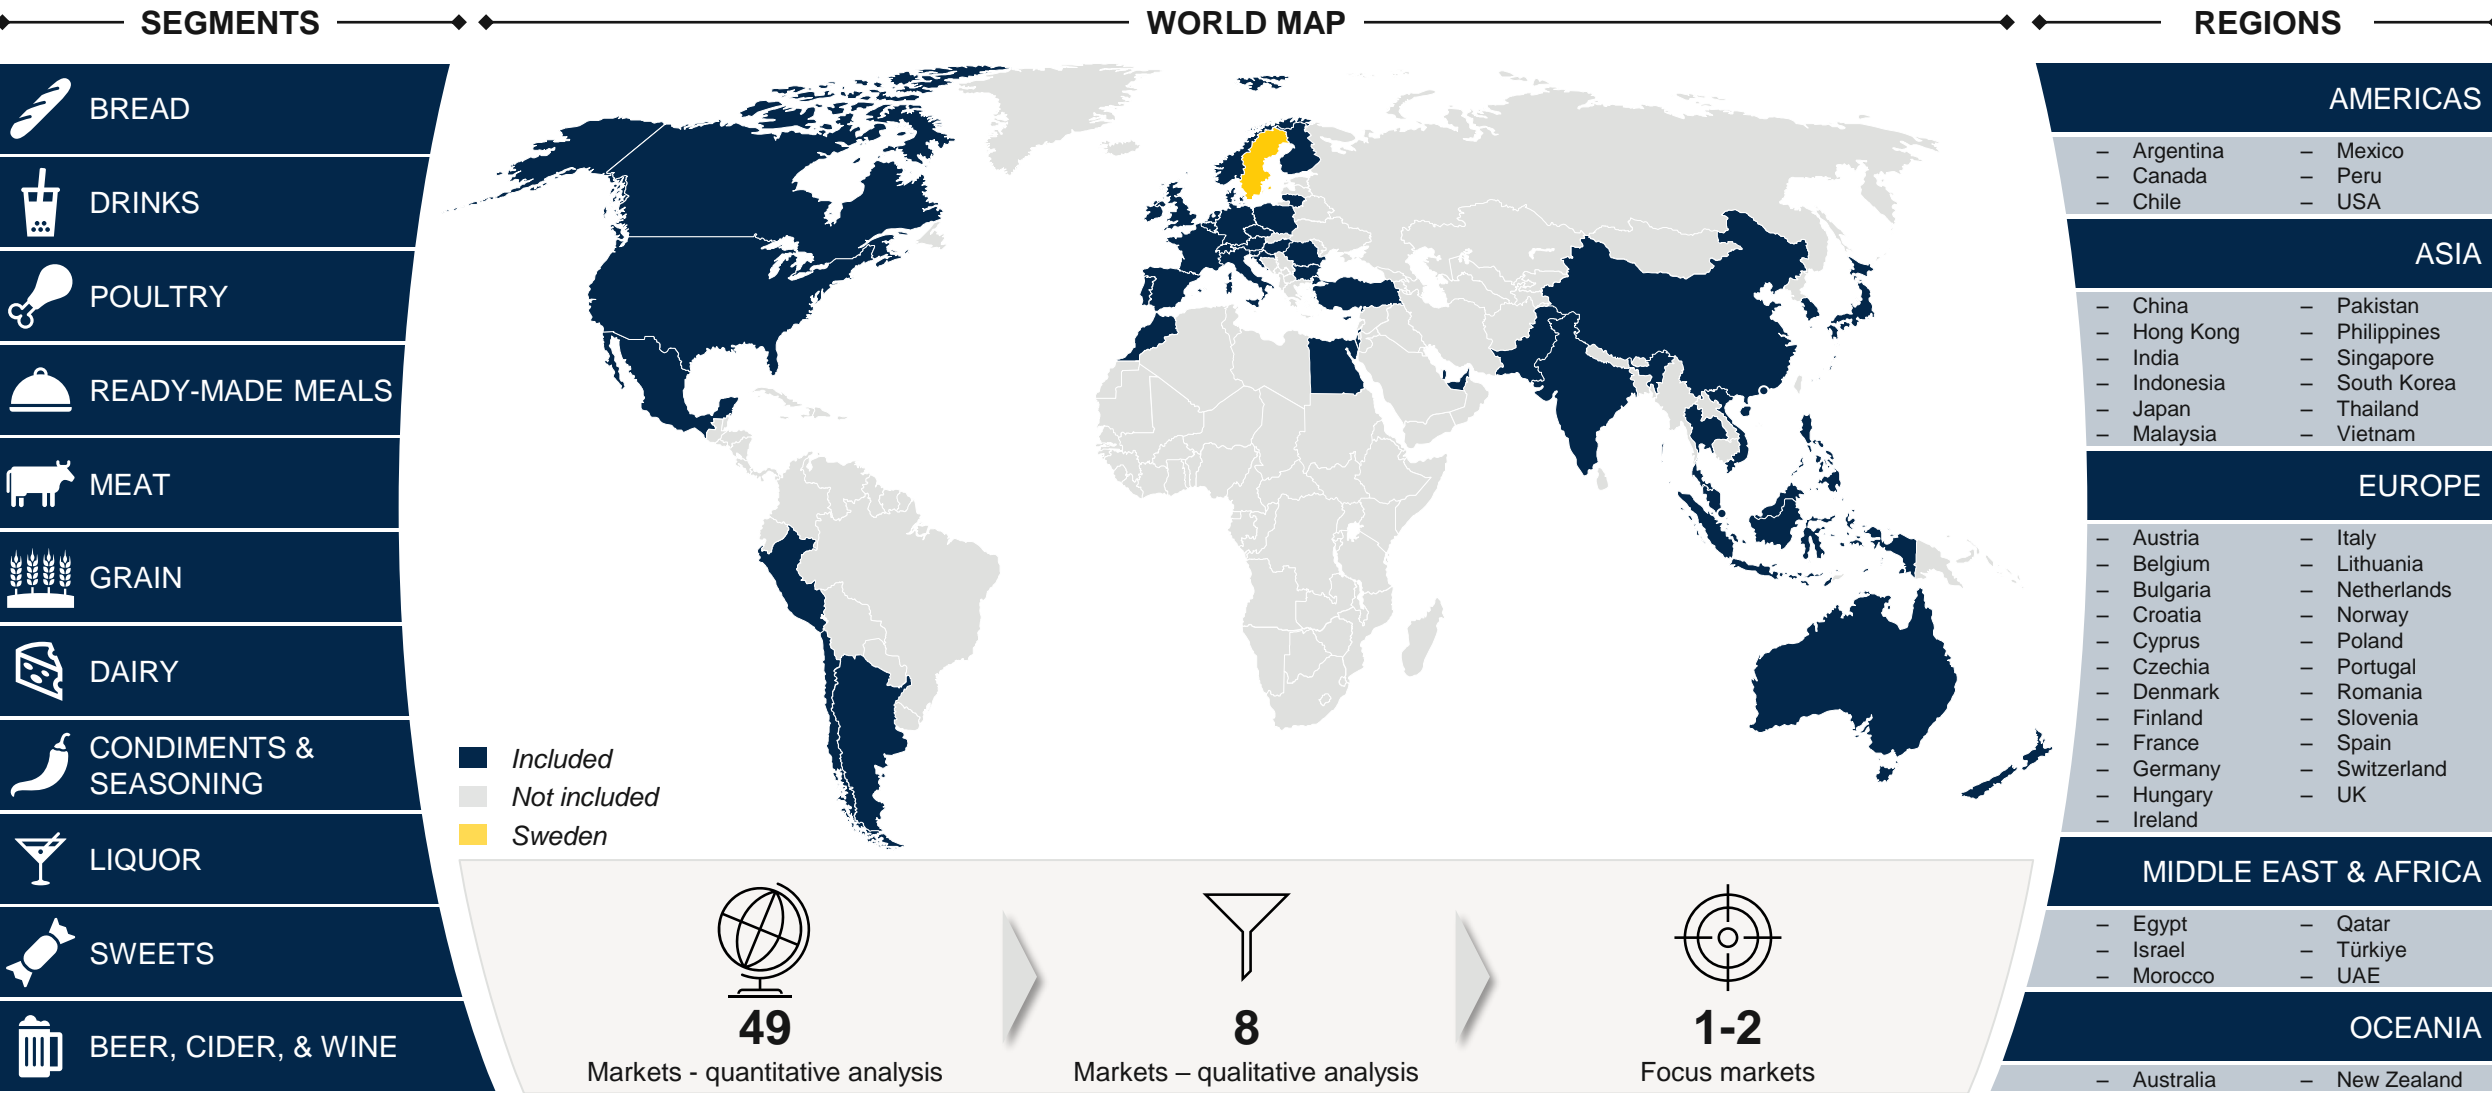

# Sweden imports more than it exports signalling low self-sufficiency; unique selling points can be leveraged to increase exports and domestic production

\*Others include: margarine, homogenized food preparations, sauces, soups, broths, mixed condiments, mixed seasonings, and yeasts  
Source: Statistics Sweden (SCB), Svensk livsmedellexport – Nulägesbeskrivning och näringens förslag på åtgärder 2024, Federation of Swedish Farmers (LRF)

# The analysis considered 49 markets around the globe initially, boiling down to 1-2 focus markets for each segment

# Business Sweden used a three-step approach to identify the most suitable markets for Swedish food exports per segment

## 1. QUANTITATIVE MARKET SELECTION

The data-driven market selection highlights the most suitable markets based on quantifiable variables

- A set of quantifiable variables are chosen for the competitive ranking
- Variables receive a weighting to reflect importance for Swedish export
- Markets are plotted according to their rank in market potential and ease of market entry

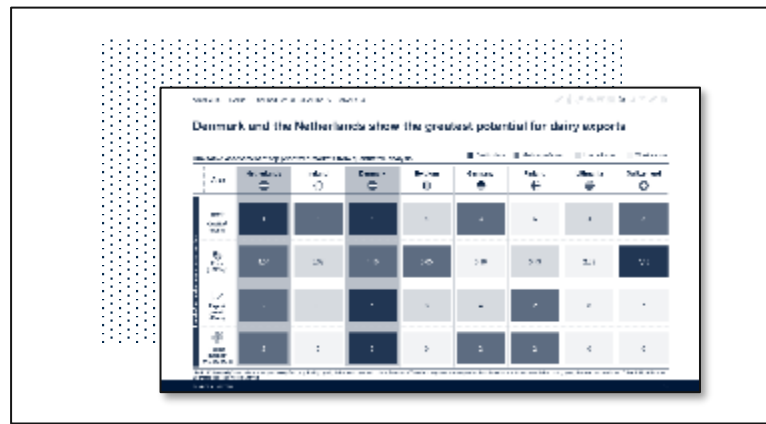

49 markets ► 8 focus markets per segment

## 2. QUALITATIVE MARKET ASSESSMENT

Further investigation of selected focus markets (8) per segment based on additional qualitative factors:

- ★★★ – Quality impacting purchasing decision
- 🏷️ – Price level per segment
- 📈 – Export growth per segment
- 👥 – Swedish companies' export priorities

8 focus markets ► 1-2 priority markets per segment

## 3. ANALYSIS & RECOMMENDATIONS

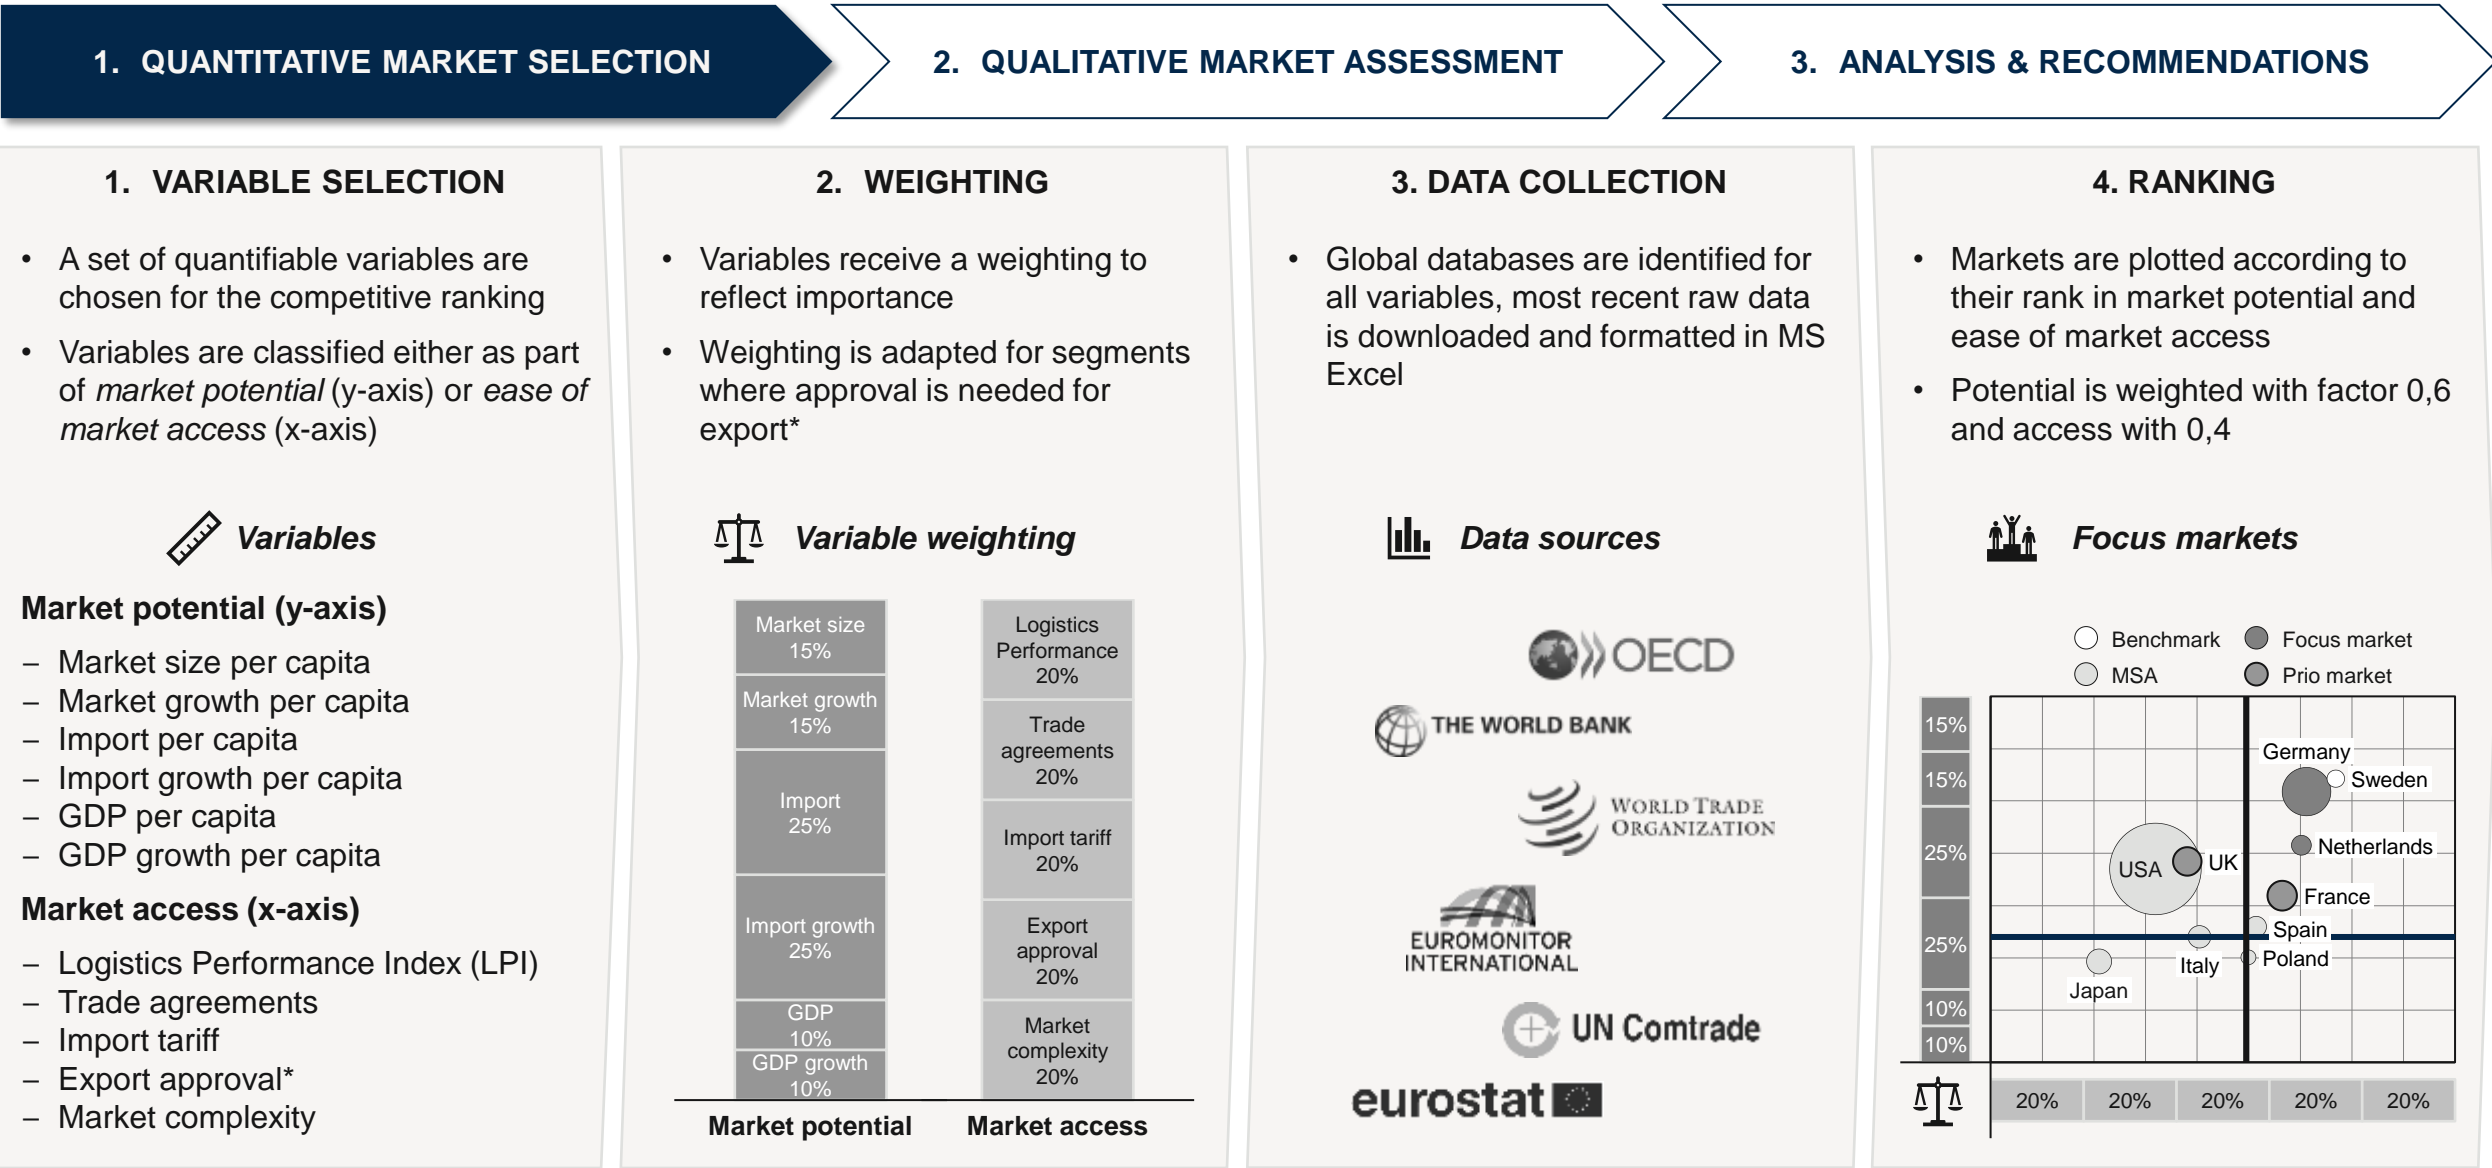

In-depth analysis of prioritised export market(s) selected in the qualitative market assessment:

- Mapping of current trends and potential challenges
- Conclusions & recommendations for Swedish companies and their export priorities

# The data-driven market selection analysis highlights eight (8) focus markets per segment based on quantifiable variables

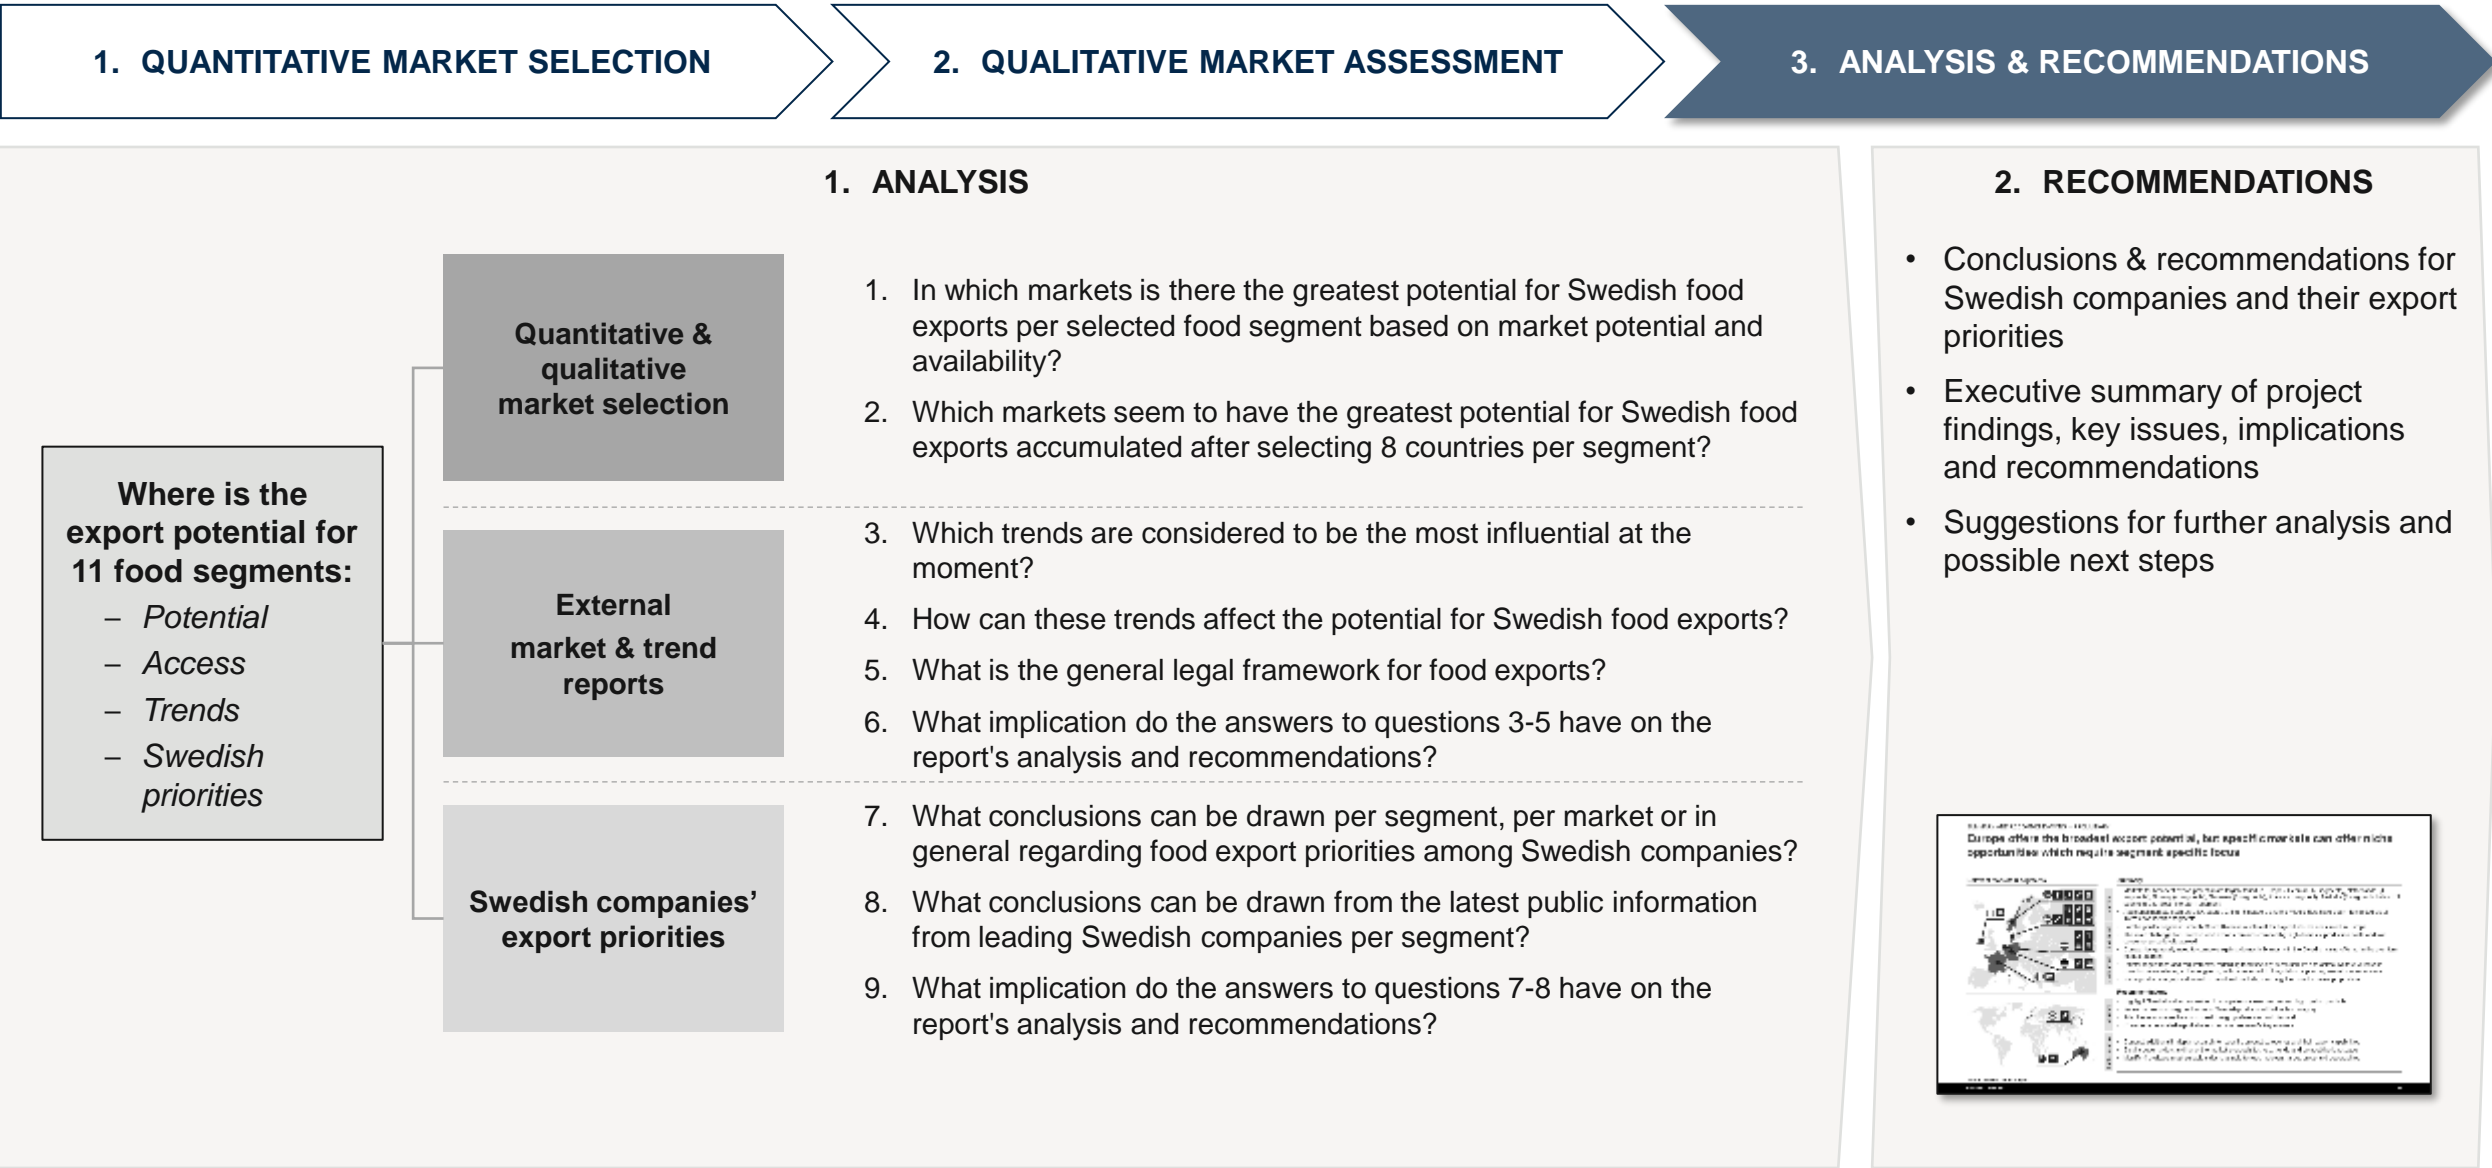

# The qualitative market assessment examines four additional dimensions to distinguish 1-2 prioritised markets per segment

\*: The survey's outcome varies for different segments due to inconsistent response rates across segments \*\*List of interviewees to be found in Appendix

# Recommendations are based on the analysis of quantitative & qualitative data as well as external reports and input from the Swedish industry

# Table of Contents

APPENDIX

# Europe offers the broadest export potential, but specific markets can offer niche opportunities which require segment specific focus (1/2)

## Relevant markets & segments

## Conclusions

- |               |  |
|---------------|--|
| Markets       | <ul style="list-style-type: none"><li>Markets for broadest export potential are largely found in Europe - Denmark (7 segments), Netherlands (4 segments), Norway (4 segments), Germany (2 segments), France (1 segment), Australia (1 segment), Ireland (1 segment) and South Korea (1 segment)</li><li>Additional markets such as USA, Japan, China, Singapore and the Middle East have been highlighted as of interest for specific segments</li></ul> |
| Challenges    | <ul style="list-style-type: none"><li>The main challenge for Swedish food exports are high domestic production costs and low consumer price-levels abroad</li><li>Swedish companies generally compete in the premium segment in foreign markets</li></ul>  |
| Opportunities | <ul style="list-style-type: none"><li>Niche products matching the Swedish value proposition are largely welcomed in prioritised markets</li><li>Stricter regulations and harmonized requirements regarding food security, sustainability and animal welfare are likely to favour Swedish value offering in the long-term</li></ul>   |

## Recommendations

- |                  |  |
|------------------|--|
| Positioning      | <ul style="list-style-type: none"><li>Highlight Swedish value proposition to compete on clean, secure and high-quality products</li><li>Focus on premium segment as most Swedish products will fall in this category</li><li>Adapt to local market trends to meet foreign preferences and demand</li><li>Consider a dedicated export strategy for your segment's key markets</li></ul> |
| Further analysis | <ul style="list-style-type: none"><li>Conduct additional in-depth research for specific product categories and their export capabilities</li><li>Build a better understanding of the market prerequisites, e.g. trends and competitive landscape</li><li>Identify and evaluate most suitable sales channels to reach relevant target group and geographies</li></ul>                   |

Source: Business Sweden Analysis

## Europe offers the broadest export potential, but specific markets can offer niche opportunities which require segment specific focus (2/2)

 <b>BREAD</b>	<b>Denmark</b> and <b>Germany</b> stand out as prioritized markets. Swedish brands already have a strong foothold in Denmark and trends suggest further expansion potential. Frozen baked goods and healthy products like rye bread and crispbread are gaining popularity in Germany.
 <b>DRINKS</b>	<b>Denmark</b> and <b>Norway</b> show most export potential in this segment. Competitive pricing as well as embracing the health and wellness trend are key factors in Denmark. Norway is witnessing a rising trend in innovation for healthy drinks with sustainability in mind.
 <b>POULTRY</b>	<b>South Korea</b> has been identified as an attractive market due to increasing demand for imported chicken in the coming years. Swedish export focuses primarily on bi-products such as chicken feet and wings, which are not consumed in Europe, but in high demand in Asia.
 <b>READY-MADE MEALS</b>	<b>Denmark</b> and <b>Ireland</b> are the most promising markets. Affordability is crucial for ready-made meals in Denmark where consumers often favour local brands. In the Irish market, transparency and environmental impact are important factors to consider
 <b>MEAT</b>	<b>Denmark</b> and <b>France</b> are the markets with the highest scores in this segment. Meat consumption is still prominent in Denmark although more consumers seek plant-based options. France values animal welfare and sustainability when consuming meat products.
 <b>GRAIN</b>	<b>Germany</b> and <b>the Netherlands</b> are the most relevant markets for the segment. While the demand is rising for local, organic and sustainable products in the Netherlands, healthier and personalised grain products are gaining popularity in Germany.
 <b>DAIRY</b>	The market ranking highlights <b>Denmark</b> and <b>the Netherlands</b> . The Dutch market is competitive and diverse but offers opportunities for sustainable and niche products. Danish preferences also align with the Swedish value offering despite growing cost concerns.
 <b>CONDIMENTS &amp; SEASONING</b>	<b>Norway</b> and <b>the Netherlands</b> are the best performing markets. Dutch consumers are willing to try new products & flavours, especially with natural ingredients. Taco Friday and barbeque popular in Norway and foreign cuisines is gaining traction with consumers.
 <b>LIQUOR</b>	Export potential for liquor is highest in <b>the Netherlands</b> and <b>Australia</b> . The Netherlands enjoy cocktails and premium spirits with strong brands dominating the market. Australia is a whiskey nation preferring premium spirits with a booming local spirit scene.
 <b>SWEETS</b>	<b>Denmark</b> and <b>Norway</b> come out on top of the list within the sweets segment. Affordability and innovation are key in the increasingly health-conscious Denmark. Offering niche products is especially important as the health trend poses challenges for the sweets market in Norway.
 <b>BEER, CIDER, WINE</b>	<b>Denmark</b> and <b>Norway</b> show the greatest export potential. A growing preference for quality over quantity benefits Swedish value offering in Denmark. Increasing consumer demand for novelty offers opportunities in a competitive Norwegian market.

CONCLUSIONS AND RECOMMENDATIONS

ANALYSIS

APPENDIX

# Denmark and Germany stand out as prioritised markets in the bread segment

Out of the 49 markets, Ireland, together with Benelux, Nordic and DACH markets perform best in the quantitative analysis

- Ireland and Belgium score highest
- USA and China have highest consumption
- Asian markets have low potential

The 8 markets were compared against each other on 4 factors, Denmark and Germany most suitable for bread exports. Best in class:

- ★★★ – The Netherlands and Denmark
- 🏷️ – Finland and Switzerland
- 📈 – Denmark and Finland
- 🎯 – Germany

- 🇸🇪 Swedish brands already have a strong foothold in Denmark, and trends suggest further expansion potential
- 🇩🇪 Frozen baked goods and healthy products like rye bread and crispbread are gaining popularity in Germany

**Focus markets**

1

Ireland (IRL)

2

Belgium (BEL)

3

Netherlands (NLD)

4

Austria (AUT)

5

Denmark (DNK)

6

Finland (FIN)

7

Switzerland (CHE)

8

Germany (DEU)

49 markets ► 8 focus markets per segment

★★★	3	4	1	3	1	6	3	3
🏷️	2,97	4,20	2,20	5,88	4,38	8,32	8,63	3,59

🎯	0	1	2	0	3	3	1	7

8 focus markets ► 1-2 priority markets per segment

# Ireland and Belgium stand out with high consumption and imports

Market Potential vs. Market Access, Market Consumption Size  
Score low-high, USD million

## Focus markets

- |                     |                     |
|---------------------|---------------------|
| 1 Ireland (IRL)     | 5 Denmark (DNK)     |
| 2 Belgium (BEL)     | 6 Finland (FIN)     |
| 3 Netherlands (NLD) | 7 Switzerland (CHE) |
| 4 Austria (AUT)     | 8 Germany (DEU)     |

## Observations

- Ireland and Belgium stand out as key markets of interest, with both demonstrating easy market access due to EU membership and potential through high levels of consumption and imports
- Bread consumption in the USA, China and Mexico is high but import tariffs and limited trade agreements complicate market access
- Italy, Germany and France are large bread markets, but with slow consumption and import growth rates
- Americas and Middle East present large market potential with fast-growing bread consumption but encounters barriers to access the market
- Asian countries have both limited potential and access, except for Japan and Korea who benefit from trade agreements

# Denmark values high quality and Germany is a target market for many Swedish companies

# Swedish brands already have a strong foothold in Denmark, and trends suggest further expansion potential

## Market trends

- Healthy and eco-friendly products are gaining in popularity, and many Danish consumers are willing to pay a premium for such products even though consumers are on the lookout for cost-effective options
- Bread with functional ingredients, such as vegetables, legumes, grains or seeds, and health claims, such as high fibre/protein, gluten free, organic, or vegan, are gaining popularity; numerous brands, including private label, are increasing their product offering of such products
- Frozen baked goods are continuously popular with Danish consumers due to convenience and sales volumes remain steady despite recent price increases
- Danish consumers are increasingly opting for locally or Nordic produced products, not only to support local businesses but also because such products are seen as more fresh, sustainable, and traceable
- The Danish market is mostly dominated by Danish or Swedish brands, Lantmännen is the largest baked goods company (over 10% market share) and Pågen is the 5th largest (1,7% market share) in 2023

## Potential challenges

- Danish consumers are opting more often for private labels due to price-levels, and the private labels are introducing new products in line with health and wellness trends in the country, possibly reducing the premium Danes are willing to pay for such products today

## Swedish value-offer match

★★★	High quality is an important factor in purchase decisions
	Increasing demand for to locally sourced and sustainable baked goods
	Traceable products are gaining in popularity
	Not applicable

## Price level

	Higher consumer price level for bread than in Sweden
--	--

# Frozen baked goods and healthy products like rye bread and crispbread are gaining popularity in Germany

## Market trends

- Consumer prices for baked goods have increased due to higher production costs caused by rising ingredient and energy prices; affecting consumer purchasing decisions and highlighting the need to reduce production costs to stay competitive
- In-store bakeries at supermarkets and discounters have continued to gain popularity, a compromise between traditional independent bakeries and packaged bread
- Demand for healthy groceries expected to grow and benefit products such as rye bread, crispbread and chia bread as health- and diet-related topics gain importance
- Growth of frozen baked goods in coming years driven by changing consumer factors such as convenience, and higher demand for high-quality ready-to-eat products
- Germany is the country where a Swedish flag on the package holds the highest regard in comparison to other countries

## Potential challenges

- The German market sells over 3 000 bread varieties across the country each day, with varying local traditions and taste preferences, making it challenging to encapsulate the market with a small product mix

## Swedish value-offer match

★★★	High quality on par with Sweden
	Shift towards healthier options and ingredients, e.g. rye, crispbread and chia
	Food safety not mentioned as a significant factor
	Not applicable

## Price level

	Slightly lower consumer price level for bread than in Sweden
--	--

- Aligned with Swedish value offer
- Not aligned with Swedish value offer

# Denmark and Norway show most potential in the drinks segment

Out of the 49 markets, Ireland, DACH markets, Benelux and the Nordics together perform best in the quantitative analysis

- Ireland and Austria score highest
- USA and China have highest consumption
- Asian markets have low potential

The 8 markets were compared against each other on 4 factors, Denmark and Norway most suitable for drink exports. Best in class:

- ★★★ – The Netherlands and Denmark
- 🏷️ – Denmark and Norway
- 📈 – Norway
- 🎯 – The Netherlands and Germany

- 🇩🇰 Competitive pricing as well as embracing the health and wellness trend are key factors for drinks in Denmark
- 🇳🇴 The Norwegian market is witnessing a rising trend in innovation for healthy drinks with sustainability in mind

Focus markets

1

Ireland (IRL)

2

Austria (AUT)

3

Finland (FIN)

4

Netherlands (NLD)

5

Belgium (BEL)

6

Germany (DEU)

7

Denmark (DNK)

8

Norway (NOR)

49 markets ► 8 focus markets per segment

★★★	3	3	6	1	4	3	1	2
🏷️	1,57	1,61	2,57	2,16	1,50	1,07	2,70	2,90
📈	4	7	2	6	7	2	4	1
🎯	0	2	1	5	3	5	1	0

8 focus markets ► 1-2 priority markets per segment

# High GDP and consumption per capita puts Ireland and Austria ahead of other EU markets

Market Potential vs. Market Access, Market Consumption Size  
Score low-high, USD million

## Focus markets

- |                     |                 |
|---------------------|-----------------|
| 1 Ireland (IRL)     | 5 Belgium (BEL) |
| 2 Austria (AUT)     | 6 Germany (DEU) |
| 3 Finland (FIN)     | 7 Denmark (DNK) |
| 4 Netherlands (NLD) | 8 Norway (NOR)  |

## Observations

- Western EU are of top priority due to high per capita rates of GDP and consumption
- All EU countries perform well in terms of accessibility, yet larger economies and select Eastern European countries lag in market potential due to moderate consumption and import rates and lower GDP rates
- North American countries follow Europe in ranking with Canada and USA having a sizeable consumption that has grown in recent years
- China and other Asian nations, despite large economies, lack priority in both accessibility and market potential due to low per capita rates of import and consumption

# Norway and Denmark rank overall high through notably higher price levels and quality

# Competitive pricing as well as embracing the health and wellness trend are key factors for drinks in Denmark

## Market trends

- The health and wellness trend is highly prominent in the market, with energy drinks, sports drinks, tea, and coffee being the best performing categories due to their reduced sugar content and perceived health benefits by consumers
- Flavoured and functional bottled water, reduced sugar carbonates, and 100% juice also experienced strong sales due to consumer emphasis on reducing sugar intake.
- Consumers are anticipated to gravitate towards lower priced segments, resulting in the expansion of private label products, as global brands leverage their strong brand awareness while private label offerings gain traction due to their affordability
- While flavoured and functional bottled water is projected to drive growth, the sustainability trend may impact demand as environmentally conscious consumers resist unnecessary purchases and single-use plastic packaging

## Potential challenges

- Private label products often offer lower prices, and consumers in Denmark are generally price-conscious. Swedish companies need to find ways to differentiate their products and communicate their unique value proposition
- Innovating in the health trend by offering functional drinks that cater to specific health needs or provide added benefits

## Swedish value-offer match

★★★	Functional drinks and health is prioritised
	Focus on low price rather than sustainability
	Similar conditions on both markets
	Not applicable

## Price level

	Higher price than in Sweden

# The Norwegian market is witnessing a rising trend in innovation for healthy drinks with sustainability in mind

## Market trends

- The rise of healthy and active on-the-go lifestyles have boosted sales of sports drinks, energy drinks, and bottled water after the covid pandemic
- The soft drinks industry is prioritising new product development and innovation towards health-conscious and sugar-free options, driven by increasing consumer demand for reduced sugar alternatives across all categories within the segment
- Consumers' growing focus on health has led to increasing selectivity in their product choices, negatively impacting sales of regular carbonates and juice while creating opportunities for healthier alternatives in energy drinks and expected growth in flavoured and functional bottled water
- Sustainability will play a key role in driving new product development in the soft drinks industry, with a particular focus on packaging as companies aim to meet EU targets for reducing plastic waste and increasing the use of recycled materials

## Potential challenges

- Aligning packaging with sustainability goals and meeting the high expectations of eco-conscious Norwegian consumers could be a challenge for Swedish companies
- Innovating in the health trend by developing functional drinks that cater to specific health needs or provide added benefits, creating unique and appealing product offerings that stand out in the competitive market

## Swedish value-offer match

## Price level

INTRODUCTION TO THE ASSIGNMENT

PROJECT SCOPE AND METHODOLOGY

CONCLUSIONS AND RECOMMENDATIONS

ANALYSIS

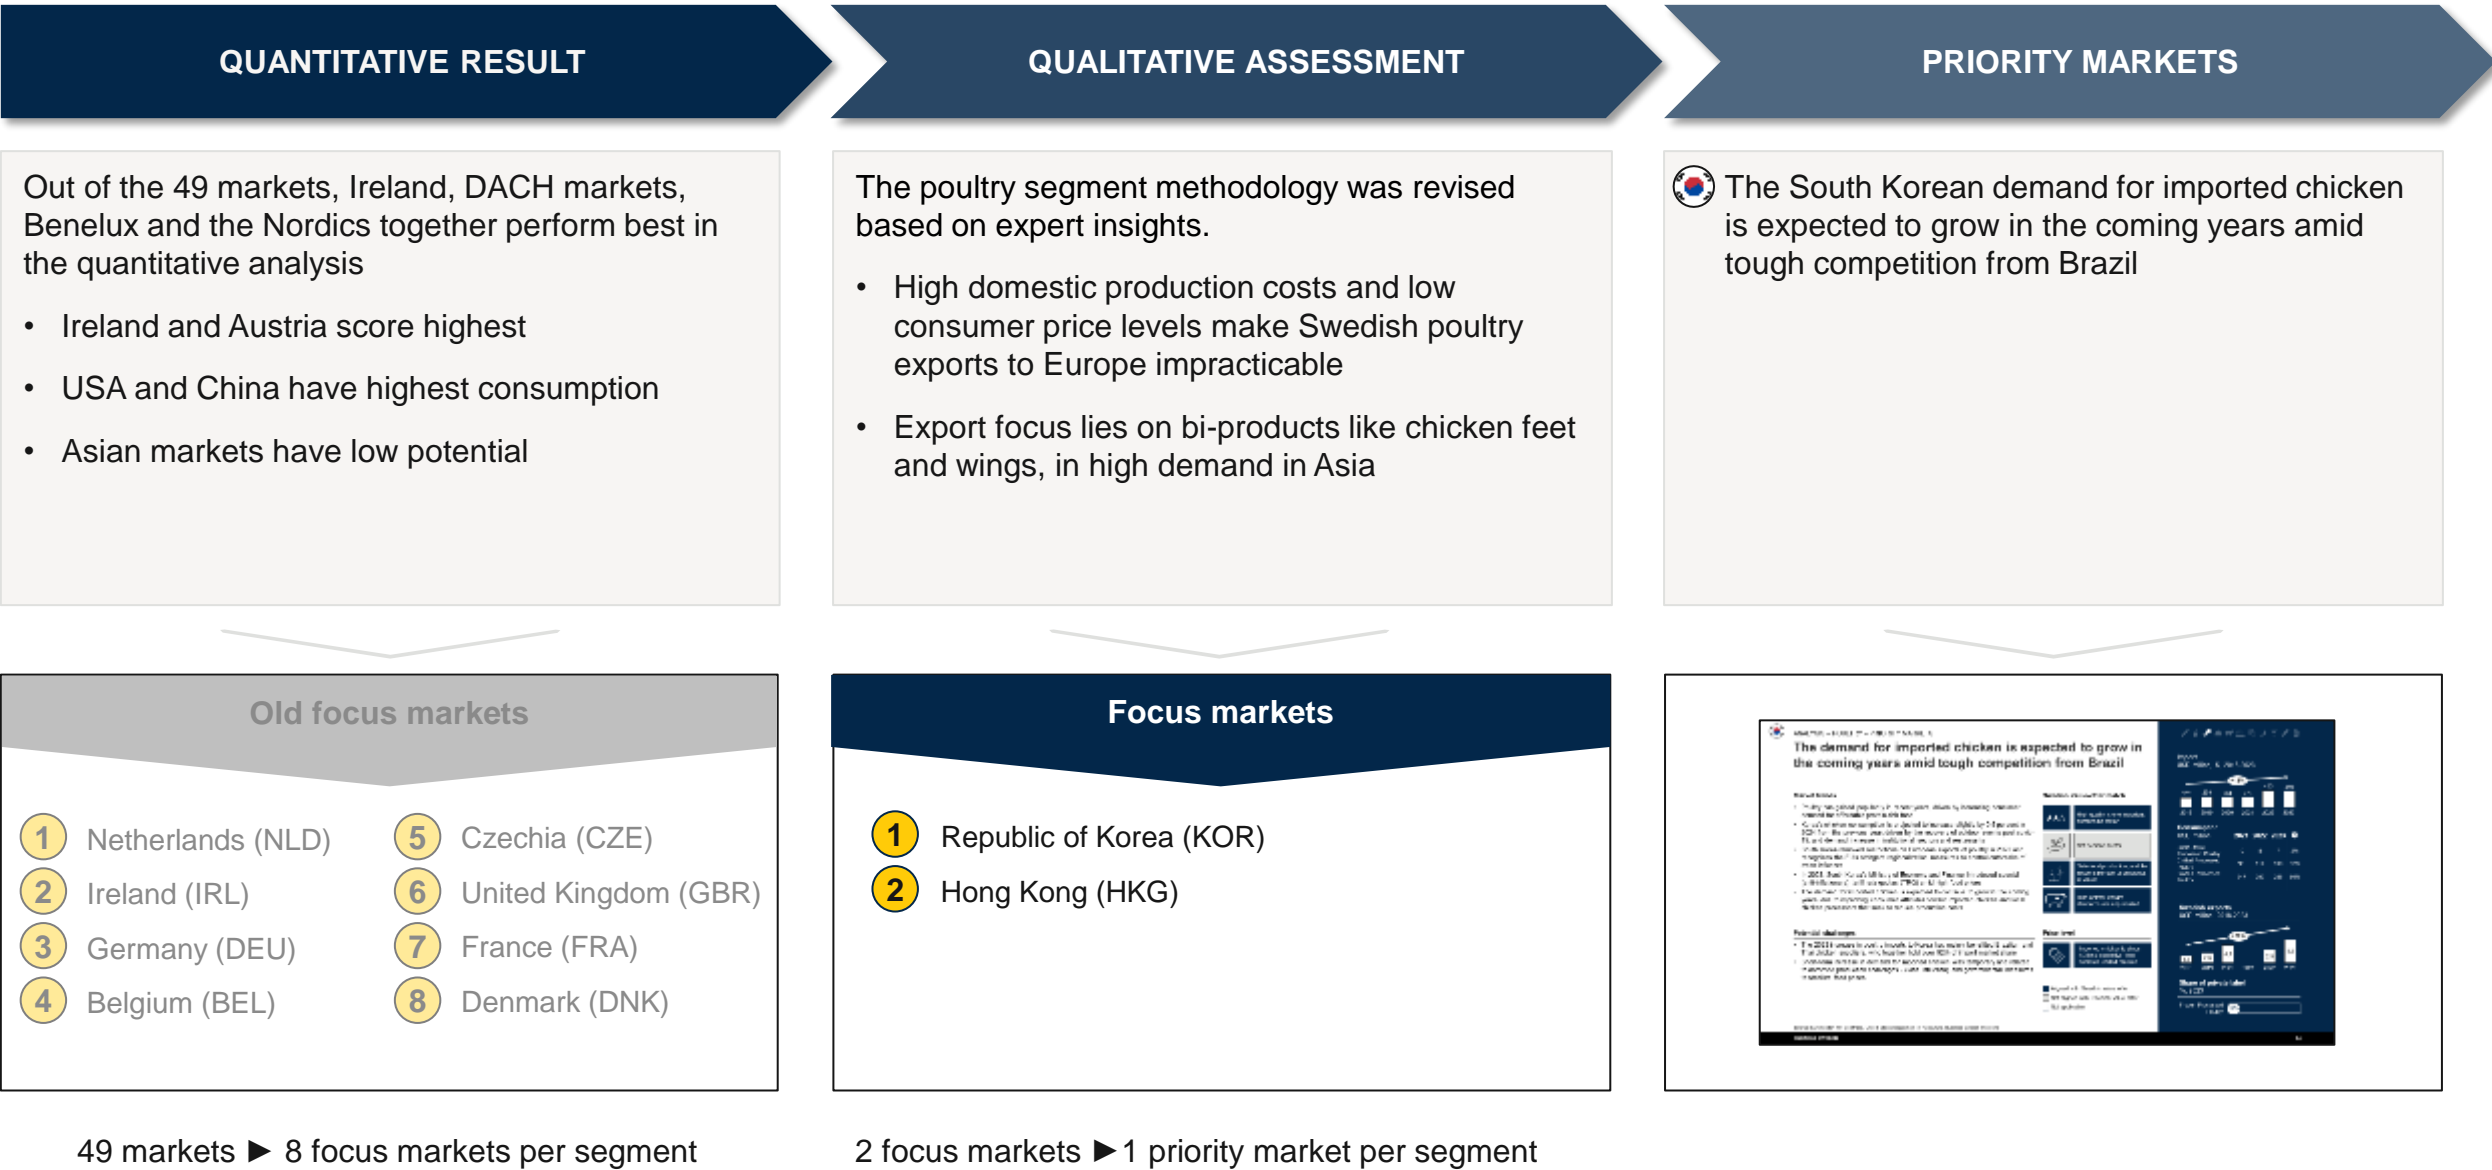

APPENDIX

# South Korea is an attractive market for poultry bi-products such as chicken feet and wings

# South Korea attractive market for bi-products such as chicken feet and wings not consumed in Europe

Market Potential vs. Market Access, Market Consumption Size  
Score low-high, USD million

\*Product categories approved for export from Sweden to market  
Source: Business Sweden Analysis, Business Sweden Interviews

## Old focus markets

- |                     |                        |
|---------------------|------------------------|
| 1 Netherlands (NLD) | 5 Czechia (CZE)        |
| 2 Ireland (IRL)     | 6 United Kingdom (GBR) |
| 3 Germany (DEU)     | 7 France (FRA)         |
| 4 Belgium (BEL)     | 8 Denmark (DNK)        |

## Observations

- Export of Swedish poultry to European markets is impracticable due to comparably high domestic production costs and low consumer price-levels
- Swedish export focus is primarily on bi-products such as chicken feet and wings, which are not consumed in Europe but in high demand in Asia
- High animal welfare standards and safe food production, including the responsible use of antibiotics are valued qualities of Swedish poultry products in this region
- Current import restrictions limit market entry to for instance China

## Focus markets

- |                           |                   |
|---------------------------|-------------------|
| 1 Republic of Korea (KOR) | 2 Hong Kong (HKG) |
|---------------------------|-------------------|

# The South Korean demand for imported chicken is expected to grow in amid tough competition from Brazil

## Market trends

- Poultry has gained popularity in recent years, driven by increasing consumer demand for affordable protein-rich food
- Chicken consumption is expected to increase slightly in 2024, especially in restaurants as people are back to living their social lives post-pandemic
- South Korea removed restrictions on European exports of poultry in 2022 and recognises the EU's stringent regionalization measures to control outbreaks of avian influenza
- Due to a recent chicken shortfall caused by the avian influenza, the South Korean authorities introduced a temporary special (anti-inflationary) tariff rate quotas (TRQ) with zero duty to balance supply and demand, which led to a peak in chicken imports\*
- Imports of chicken are expected to rise in the coming years as consumers develop a more positive attitude towards it, and because imported chicken is more affordable than domestic option

## Potential challenges

- The 2023 increase in poultry imports to South Korea has mainly benefited Brazilian and Thai chicken suppliers, who jointly hold over 92% of import market share
- Short-term increase in demand for imported chicken was temporary and related to domestic production challenges (avian influenza) and governmental measures to stabilize food prices

\*The TRQ was effective from second half of 2022 to December in 2023. The TRQ was revised and extended into 2024

8 focus markets ► 1-2 priority markets per segment

Local producer preference challenges Swedish companies in Denmark, where affordability is crucial for ready meals

Transparency and environmental impact are important factors to consider in the Irish market for ready meals

# Canada’s high market potential is driven by large imports and consumption per capita

Market Potential vs. Market Access, Market Consumption Size  
Score low-high, USD million

## Focus markets

- |                     |                 |
|---------------------|-----------------|
| 1 Canada (CAN)      | 5 Germany (DEU) |
| 2 Netherlands (NLD) | 6 Ireland (IRL) |
| 3 Finland (FIN)     | 7 Austria (AUT) |
| 4 Belgium (BEL)     | 8 Denmark (DNK) |

## Observations

- Canada leads with high per capita scores in consumption and imports, with the Netherlands close behind
- The Nordics show strong potential with Finland having significantly high consumption per capita rates, yet limited import growth rates
- Major European countries lag with for instance France having negative consumption and import trend
- Japan is a large consumer both in absolute and per capita terms, yet limited import per capita and market access
- Asia and Australasia have high market potential but face access challenges
- Middle East show moderate consumption and growth rates per capita, yet limited import rates

# Affordability is crucial for Swedish companies in Denmark as they navigate the health trend-influenced market

## Market trends

- Variety and aspects like fresh ingredients are key factors when promoting ready meal products
- The health and wellness trend in Denmark is strong and private label options have become popular, providing more affordable alternatives
- Frozen soups has become popular as they are convenient, quick to prepare, and nutritious, with introduction of new organic-based soups targeting health-conscious consumers
- High inflation drives price consciousness however Danish consumers still choose vegan and vegetarian options driven by health and sustainability concerns
- Prepared salads are gaining popularity due to their convenience, health benefits, and use of climate-friendly or local ingredients
- Danish consumers prioritise local production for environmental reasons, support for local farms, and trust in the quality and nutritional profile

## Potential challenges

- The popularity of private label options in Denmark and Danish consumers’ price sensitivity can pose a challenge for Swedish products since they are considered more expensive
- Consumers prioritise local brands which may pose challenges for Swedish to build trust and establish credibility

## Swedish value-offer match

★★★	Emphasis on freshness and variety
	Favouring climate friendly options, organic products
	Similar conditions on both markets
	Not applicable

## Price level

	Lower price than in Sweden

# Transparency and environmental impact are important factors to consider in the Irish market for ready meals

## Market trends

- Health and convenience are major trends on the Irish market as consumers seek quick, balanced meals to fit their busy lifestyles and dietary needs
- Transparency and consumer education is common in the ready meals segment, where products offer both nutrition and education through packaging, explaining the macronutrients and their role in the body
- Ultra-processed ready meals remain decrease in popularity due to their environmental footprint, where consumers are increasingly opting for choices with smaller environmental impacts, such as plant-based meals, and are actively seeking ways to reduce food waste
- Vending machines for frozen ready meals are a growing trend in the Irish market, catering to the demand for convenient meals and the rise of remote or flexible working patterns
- Established brands are gaining influence in the Irish ready meals and soup market due to consumer trust, consistent quality, and innovation in meeting evolving demands

## Potential challenges

- Meeting consumer demand for transparency by ensuring accurate and easily accessible information about nutrients on product labels can be challenging, as businesses need to effectively provide this information on packaging, websites, and other communication channels
- Companies will need to differentiate themselves and find a unique selling point to compete with local established brands as well as gaining consumer trust

## Swedish value-offer match

★★★	Innovation and quality
	Reduce food waste and environmental footprint
	Transparency and information on nutrients

| 3 Denmark (DNK)     | 7 Austria (AUT) |
| 4 Italy (ITA)       | 8 Belgium (BEL) |

## Observations

- Strong performance from EU countries, with Western Europe standing out due to high consumption rates albeit limited growth in consumption and import
- The Netherlands stands out with notably higher scores in potential, especially in import per capita, and access compared to other countries, yet relatively small market consumption
- Continental Europe has high consumption rates in absolute terms
- Meat exports to large economies like USA, China and Japan, and Middle Eastern countries are either restricted or disapproved
- Meat products are approved in Canada, Hong Kong and Singapore, with the two latter scoring significantly high in import per capita

# Denmark shows potential due to high quality preferences and strong growth in imports from Sweden, while France's potential is driven by high meat prices

Qualitative assessment of top prioritised markets from quantitative analysis

Best in classMedium performerLow performerWorst in class

Area	Netherlands	Ireland	Denmark	Italy	Czechia	France	Austria	Belgium

# Meat consumption is prominent in Denmark although more consumers seek innovative plant-based options

## Market trends

- Pork and beef are the most popular meat options on Danish plates, ahead of poultry and fish
- There is a prominent plant-based trend, yet traditional meat consumption is expected to remain important
- Hybrid products are gaining momentum i.e. producers seek to offer new products that replace some of the meat content with vegetables
- For Danish consumers, product innovation is appreciated, and especially new flavours are expected to be a key feature in the future
- Chilled processed meat has a significantly higher sales share compared to shelf stable and frozen processed meat
- Meat snacks sales have increased recently with brands like KiMs and Crispy
- Major players include Tulip Food with a 32% market share of the processed meat market, followed by Coop Danmark at 13%

## Potential challenges

- Large domestic production of meat could potentially challenge foreign exports from Sweden
- While the plant-based trend can be favourable for Swedish export, fresh meat could be challenging
- Denmark has a lower price level on meat although not a price conscious when it comes to meat

## Swedish value-offer match

★★★	High quality the most important factor in purchase decisions
	Products promoting sustainability are valued
	Similar conditions to Sweden regarding food safety
	Increased awareness around animal welfare

## Price level

	Lower price level compared to Sweden

# France values animal welfare and sustainability when consuming meat, with more switching to plant-based

## Market trends

- Meat patties like burgers and steak haché are popular meat dishes among the French and is forecasted to sustain its success
- Back to normal after the pandemic has resulted in people having less time to cook and therefore ordering food from restaurants
- Consumers seek affordable options like minced meat before quality steaks
- Most meat purchases occur in retail stores, yet a growing popularity in sales through specialised butchers
- Vegetarian and flexitarian diets are becoming increasingly popular but is not expected to become mainstream
- Legislation from October 2022 prohibits the use of meat names on locally produced plant-based food including meat, although imported products are not affected by this law
- The meat market is fragmented, with the largest Fleury Michon and Casa Tarradellas SA, each holding an approx. 7% market share

## Potential challenges

- Meat industry is powerful in France, but has faced criticism for its carbon-related impacts on the environment
- Skepticism around meat substitutes as they are considered to be highly processed

## Swedish value-offer match

★★★	High quality is not prioritised in decision-making
	Environmental sustainability is a priority for consumers
	Transparent meat value chain is valued
	Animal welfare is important in meat consumption

## Price level

	Higher price level compared to Sweden

| 1 Belgium (BEL) | 5 Poland (POL)      |
| 2 Germany (DEU) | 6 Canada (CAN)      |
| 3 Ireland (IRL) | 7 Netherlands (NLD) |
| 4 Finland (FIN) | 8 Austria (AUT)     |

## Observations

- Belgium, Germany and Ireland stand out as most relevant with easy accessibility and high potential, with Belgium scoring significantly high in per capita consumption and import
- Poland's import and consumption per capita have grown in recent years
- Canada is the sole non-EU country in the top 8 list due to fair market access and growing consumption rates
- Selected Asian markets such as South Korea show high potential with high consumption per capita rates but lack accessibility. South Asia lags due to limited accessibility and low import rates
- France scores similar to Sweden due to comparatively low import and consumption levels per capita

Source: Business Sweden Analysis

# Germany and the Netherlands score highly across all categories despite low price levels compared to Sweden and other markets

Qualitative assessment of top prioritised markets from quantitative analysis

# Demand is rising for local, organic and sustainable products in the Netherlands

## Market trends

- Majority of bread consumption takes place during lunch, and as lunch prices increase, more individuals opt to bring own lunches, often consisting of bread
- Home baking trend weakening as Dutch consumers are returning to their old routines of buying unpackaged pastries from bakeries prior to Covid-19 pandemic
- More individuals are drawn to local bakeries and stores that highlight the use of high-quality ingredients, local sourcing, and artisanal preparation methods
- Health-conscious consumption drives increased growth of organic bread consumption, increasing demand for organic wheat and grains
- Breakfast cereals are increasingly viewed as a healthy option by consumers, driving growth of high protein cereals, such as muesli and granola, and children’s cereal with less sugar
- Growing interest in foreign cuisine, increasing demand for rice and noodles

## Potential challenges

- The Netherlands import almost twice as much as it consumes, indicating that the country is a transit node for exports in and out of the area, and possibly giving local actors high access to various grain products at a low price
- Government support for organic and sustainable farming may create challenges to compete against Dutch farmers on the market

**Note:** Grocery sales channel not segment specific. No data available for 2023  
**Source:** Business Sweden Analysis, Business Sweden Interviews, Euromonitor, UN Comtrade

## Swedish value-offer match

★★★	High quality most important in purchase decisions
	Increasing demand of organic and sustainable wheat and grain

# Healthier and personalised grain products are increasing in demand in Germany

## Market trends

- High ingredient and energy prices have had a significant impact on the production costs of baked goods and cereal manufacturers driving private label popularity through price competition
- Consumers are actively seeking cereal options that transcend the confines of breakfast and can serve as snacks or meal replacements
- Demand for healthier grain products expected to rise as health- and diet-related topics gain importance
- Baking at home gained popularity during the pandemic but has begun to lose its appeal, benefitting local bakeries and baked goods in retail, which in turn favours B2B products
- In-store bakeries at supermarkets and discounters have continued to gain popularity, a compromise between traditional independent bakeries and packaged bread, shifting potential customer base more toward grocery retailers rather than large and small bakeries

## Potential challenges

- Shift toward less home baking may decrease the benefits of Swedish flags on packaging as bakeries and professional customers may value other factors higher, such as low bulk prices
- Premium breakfast brands see bigger opportunities online where they can offer consumers the possibility to personalise their breakfast cereals, posing possible challenges to Swedish manufacturers if they lack the market knowledge to adapt to German tastes

## Swedish value-offer match

★★★	High quality on par with Sweden
	Shift towards healthier ingredients such as rye
	Food safety not mentioned as a significant factor
	Not applicable

## Price level

	Slightly lower consumer price level for bread than in Sweden

| 4 Belgium (BEL)     | 8 Switzerland (CHE) |

## Observations

- Dairy products show high potential in EU nations and Switzerland, with the Netherlands and Ireland scoring high rates in consumption and import per capita
- Major EU economies – Germany, France, and Italy – are key players in the global dairy market with high total consumption rates, yet ranks relatively low in potential
- Asian markets like China and India have high consumption rates but lag in accessibility and potential because of lack of trade agreements with Sweden
- Japan ranks low compared to Asian counterparts in market potential by having one of the world’s strongest domestic dairy market and therefore low import rates

# Denmark and the Netherlands stand out as priority markets due to similar focus on quality and growing demand

Qualitative assessment of top prioritised markets from quantitative analysis

# The Dutch dairy market is competitive and diverse but offers opportunities for sustainable and niche products

## Market trends

- Increasing demand for diverse dairy products and plant-based alternatives due to evolving consumer preferences towards sustainability and unique flavours
- A significant increase in impulse ice cream sales shows that consumers are enjoying cold treats beyond summer months
- Growing focus on social sustainability and demand for ethically sourced dairy products
- Consumers prioritise protein-rich dairy options which is reflected by a market demand towards healthier choices
- Major players like Royal FrieslandCampina, Danone and Arla Foods dominate the market, although private labels are gaining momentum (e.g. retailer Albert Heijn) due to consumers becoming increasingly price conscious

## Potential challenges

- Compliance with regulatory standards and evolving food safety is challenging for already active players on the market, and could be for Swedish exports
- The competitive landscape is becoming increasingly diverse, with major players having strong market share alongside the rapid growth of private label products
- Dutch are to some extent price conscious which could pose as a potential challenge for Swedish exports

## Swedish value-offer match

★★★	High quality important in purchase decisions
	Shift towards plant-based alternatives and focus on environmental concerns
	Similar conditions regarding food safety in both countries
	Social responsibility in dairy production is emphasized in the market

## Price level

	Higher consumer price level for dairy products than in Sweden

# Danish preferences align with the Swedish value offering despite prevalent cost concerns

## Market trends

- Plant-based dairy has recently experienced a slow growth, although shows potential for mainstream acceptance with upcoming launches of new products
- Collaborations between businesses promote health-focused and organic ice cream
- Sustainability gains prominence with initiatives like climate labelling and emphasis on local, organic, and upcycled ingredients
- Consumer preference for local and natural products quality ingredients drives demand for premium and artisanal options, although high-priced, premium, and organic products saw reduced popularity due to cost concerns among consumers
- Major players like Arla Foods Amba and Thise Mejeri Amba hold a significant market share in the Danish dairy market

## Potential challenges

- Denmark has a milk surplus, which is a result from overproduction and could pose challenges for exporting countries as Denmark's domestic market is already saturated
- Consumers are price conscious and opt for economy, private label, and mainstream brands, while premium and organic products have recently witnessed a decreased popularity due to cost concerns among consumers

## Swedish value-offer match

★★★	High quality important in purchase decisions
	Emphasis on organic products
	Similar conditions in both countries
	Standards are generally high in the country

## Price level

	Lower consumer price level for dairy products than in Sweden

| 3 Canada (CAN)      | 7 Switzerland (CHE) |
| 4 Germany (DEU)     | 8 Norway (NOR)      |

## Observations

- European economies i.e. Ireland and the Netherlands, along with Canada, show high market potential and access
- The Netherlands stands out with high import per capita, while Canada in turn scores high in consumption per capita. Ireland scores high in both these parameters
- Italy and France exhibit high access due to EU membership but scores generally low in the market potential parameters. Middle East demonstrates strong market potential but low access, with for instance Qatar having high import per capita
- India show both low access and potential

# Norway and the Netherlands show the greatest potential for exports within the segment, partly driven by consumers’ demand for quality and export growth

# Dutch consumers are increasingly willing to try new products and flavours especially with natural ingredients

## Market trends

- Tighter consumer budgets are driving consumers to opt for more private label products or traditional products with promotional or discount prices; home delivery retailer Picnic launched the campaign “Travelling for the Price”, centred around offering prices similar to the German market
- The barbeque season during the warmer months drive increased marketing attention and promotion to the segment, mainstream sauce manufacturers are introducing new products to capture consumer interest and non-food companies, such as Weber, have introduced their own barbeque sauces
- Dutch consumers are increasingly more interested in natural and fresh products and brands are introducing natural, organic, and vegan options to capture the trend
- Dutch consumers display a growing willingness to try new products with rising demand for diverse and flavourful sauces

## Potential challenges

- Brands currently on the Dutch market have been agile to diversify their product portfolio to adapt to consumer trends and introduce new products focused on organic and natural ingredient and new flavours, possibly creating challenges for brands not established on the Dutch market to gain significant market shares

## Swedish value-offer match

★★★	High quality most important in purchase decisions
	Increasing trend on natural, healthy and sustainable products
	Food safety not mentioned as a significant factor
	Not applicable

## Price level

	Higher consumer price level for condiments & seasoning than in Sweden

# Taco Friday and barbeque popular in Norway and foreign cuisines is gaining traction with consumers

## Market trends

- Sauces, dips and condiment sales soared in sales in 2020 as Norway implemented lockdowns due to the Covid-19 pandemic, sales have since stabilised, but a majority of meals are still eaten at home
- Taco Friday is a significant feature in many Norwegian homes, as well as barbeque
- Private label has become more popular as consumers look for cheaper options due to higher food prices
- Norwegians are open to try new cuisines, Asian foods is now considered a staple in many homes, and Middle Eastern and North African inspired products have begun to appear in the market as consumers’ interests widen
- Bouillon and other cooking ingredients have dropped off in sales as Norwegians turn more to ready-made meals instead of cooking from scratch
- Shrinkflation has been met with bad reception from Norwegians, consumers rather buy products from brands that keep the same volume but raise the price

## Potential challenges

- Norwegian branding is increasingly used by brand products to compete against private labels, indicating that consumers value Norwegian branded products, meanwhile, Swedish branding on packages is generally weaker in the Nordics than other markets such as Germany and France
- Private label has grown within the segment and retailers are expanding their product mixes continuously, including premium products, which is expected to make it increasingly difficult for branded products to stand out in the market

## Swedish value-offer match

★★★	High quality more important in Norway compared to Sweden
	Recyclable packaging and local ingredients important
	Food safety not mentioned as a significant factor
	Not applicable

## Price level

	Slightly lower consumer price level for condiments & seasoning than in Sweden

64

# The Netherlands enjoy cocktails and premium spirits with strong brands dominating the market

## Market trends

- Bars, clubs and restaurants experienced a sharp sales increase when Covid restrictions lifted, though still below pre-pandemic levels
- Recent consumer trends show a preference for premium experiences with a notable rise in popularity of cocktails and high-end spirits
- Spirits associated with cocktails such as liqueurs have highest sales share and premium spirits like whiskey and cognac have gained popularity recently
- Non-alcoholic spirits is forecasted to rise in popularity, although unlikely to become a conventional product
- Domestic spirits like Dutch gin and vieux has declined, especially among younger individuals
- Major players include Maxximum, Diageo and Bacardi-Martini, making up almost 50 % of the spirit's market

## Potential challenges

- Producers and retailers are facing higher costs which could lead to price adjustments and in turn consumers purchasing less
- Strong brand recognition among existing market players which could be a challenge to newcomers gaining traction and market share

## Swedish value-offer match

★★★	Demand for high-end spirits
	Sustainability in specifically this segment not highlighted
	Credibility for quality products and non-illicit products
	Not applicable

# Australia is a whiskey nation preferring premium spirits with a booming local spirit scene

## Market trends

- Whiskey still live on of being the most popular spirit in Australia and the country is experiencing a cocktail drink boom
- Australians still favour high quality liquor despite the tough economic environment
- Instead of buying premium whiskey, Australians opt for other more affordable, but still of the high-quality category, spirits like tequila or rum when making drinks
- Gin is popular and comes in many flavours from local distilleries, but other spirits like tequila is expected to overtake gin in the future
- Non-alcoholic liquor is trending due to health awareness and presents opportunities for companies to be innovative with their offering
- Diageo is the largest player with 34% market share, followed by Beam Suntory and Pernod Ricard

## Potential challenges

- Australia is a nation far away, which could pose as a challenge for Swedish exports and requires significant investments
- Australian spirits boomed during the pandemic as consumers wanted to support local distilleries, and is expected to continue its growth path, which could be a potential challenge for international newcomers

## Swedish value-offer match

## Market trends

- Pick and mix category is growing after the COVID-19 crisis
- There is a slowdown of organic sugar confectionary due to high inflation and price pressure forcing Danish consumers to choose less expensive options
- Health consciousness has become a priority leading to more natural ingredients and less sugar in the largest product category: pastilles, gummies, jellies, and chews
- Liquorice is expected to see the strongest growth as brands focus on premiumisation
- The market for chocolate confectionery is set to be constrained due to increase in the costs of raw materials leading to higher retail prices, while inflation is not said to have had a negative impact on the segment
- Craft chocolate is a popular category, Danish consumers value innovative ingredients, stylish packaging and healthier options

## Potential challenges

- Highly price pressured market can pose difficulties in the sugar confectionary segment
- As the consumption of regular confectionery is expected to decrease, challenges lies in innovating towards healthier confectionary

# Offering niche products is important as the health trend poses challenges for the sweets market in Norway

## Market trends

- Retail volume decline is expected due to a rising health and wellness trend as many consumers choose healthier snacks with less sugar, fat and calories
- The health and wellness trend create opportunities for innovation for healthier option in the segment
- Norwegians tend to go cross border to shop sweets from Sweden since the price is considerably lower
- Plant based options are in demand on the market as vegan gummies, gluten-free and high protein options have gained popularity
- Vegan chocolate is set to see strong growth on the market, linked to the health and wellness trend as well as the premiumisation trend grows for chocolate
- More exotic flavours and combinations are expected in the chocolate category to create excitement and attract consumers

## Potential challenges

- Consider consumer demand of healthier confectionary and finding a niche on the market could be a challenge for Swedish companies
- As the consumption of regular confectionery is expected to decrease, challenges lies in innovating towards healthier confectionary

**Note:** Grocery sales channel not segment specific. \*Vinmonopolet is the monopoly for the distribution of wine and spirits in Norway (alcohol over 4,75%) \*\*Others include ~15 companies with 7% market share or less

# A growing preference for quality over quantity benefits Swedish value offering in Denmark

## Market trends

- Consumers favour cider made from local, high-quality apples and there is a growing trend of expanding flavour options by adding e.g. berries
- Wine producers are increasingly prioritising recyclable packaging and sustainable production practices
- The growth in the wine segment is fuelled by the rising popularity of sparkling wine, still rosé wine, still light grape wine, and non-alcoholic wine
- Carlsberg is a prominent local player, focusing on innovation to drive growth
- Non-alcoholic beer has become popular in Denmark, with growth driven by local microbreweries as well as a preference for quality over quantity
- The strong health trend is driving the demand for non-alcoholic and organic options in the beer segment, with consumers specifically interested in products that feature natural ingredients and sustainability claims.

## Potential challenges

- The market is highly dominated by local brewery giants, Carlsberg Danmark and Royal Unibrew, who offer many products in beer and cider pose challenges for foreign players since both play a big role in Danish culture
- Meeting consumer demand for innovative non and low alcoholic drinks (cider and other alternatives) as well as for price, can be challenging in an already competitive landscape

# Increasing consumer demand for novelty and innovation offers opportunities in a competitive market

## Market trends

- The market faced challenges due to high inflation rates and cautious consumer spending, causing a decline in all categories, but there is a growing interest in non-alcoholic and low alcoholic beverages, notably cider, fuelled by the health and wellness trend
- Premium cocktails or premixed cocktails sold in grocery chains will continue to grow in popularity as a substitute for other sweet low-alcohol beverages, especially cider
- There is a high focus on innovation in response to consumer demand for novelty, resulting in the introduction of new products such as exotic flavour variants in cider and premium craft ready-to-drink cocktails
- The demand for sustainable and environmentally friendly packaging is high among consumers and Vinmonopolet, the Norwegian monopoly for wine and spirits, introducing new packaging requirement start 2026
- Consumer preferences for lighter, lower sugar wines drive the introduction of new wine types like orange wine, natural wine, pét-nat, sake, and fruit wine

## Potential challenges

- Finding a unique selling point on the market and compete with local larger players could be challenging for smaller breweries
- Managing market entry through Vinmonopolet can pose challenges due to limited options of marketing and availability
- Meeting consumer demand for innovative non and low alcoholic drinks, including cider and other alternatives, can be challenging in an already competitive landscape
